I know that this issue lies waaaaa behind. But maybe I can help someone with that code. I didn't even have to write a hard drive file. :-) Response.AddHeader Response.AddHeader (content length, base64Result.length.ToString); Response.AddHeader Response.AddHeader (Cash Control, private, max-age=0, necessarily revalidate); Response.AddHeader (Pragmatic, public); Answer. BinaryWrite (Transformation. FromBase64String (base64Result)); Note: 'base64Result' variable contains Base64-String: JVBERi0xLjMgCiXl48/TIAoxl... Happy coding! :-) Comments: 43 Rating: 4.9/5 Convert Base64 in PDF online using a free decoding tool that allows you to decipher Base64 as a PDF and display it directly in the browser. In addition, you will get some basic information about this PDF (type MIME, extension, size). And, of course, you will have a special link to download the PDF to the device. If you're looking for a reverse process, check the PDF on Base64. Important notes about the Base64 to PDF Decoder will cause the decoding result to appear as a PDF file, even if it is a different type of file. So if you're not sure that your Base64 line is a PDF, use Base64 for the file converter because it's capable of displaying different types of files. Either way, feel free to give it a try, as this converter will let you know if something is wrong. About PDF Name: Portable Document Format Developer: Adobe Inc. MIME Types: app/pdf, app/x-pdf, app/x-bzpdf, app/x-gzpdf file extension: .pdf Single type ID: com.adobe.pdf The easiest way: byte use (Flow flow and new IO. FileStream (file.pdf) - buffer - new stream. Length - 1 euro; Stream. Read (buffer, 0, buffer.length); use (flow flow stream and new IO. FileStream (newFile.pdf) - stream. Write (buffer, 0, buffer.length); Or something in that direction ... I use a similar code with a few differences: Response.Clear(); MemoryStream ms - new MemoryStream (pdfByte); Response.ContentType - app/pdf; Response.AddHeader (content-disposition, app.filename-labtest.pdf); The answer. Ms. WriteTo (Reply. OutputStream); Answer. Call Reponse.Clear earlier. Use MemoryStream.WriteTo to write on Response.OutputStream. Edit: Sorry, I didn't see that you use ASP.NET MVC, the above code is in the WebForms.aspx page. For ASP.NET MVC, could you just bring back the new FileStreamResult (ms, app/pdf); CodeProject, 503-250 Ferran Drive Toronto Ontario, M3C 3G8 Canada No. 1 416-849-8900 x 100 CodeProject, 503-250 Ferran Drive Toronto Ontario, M3C 3G8 Canada No. 1 416-849-8900 x 100 I work with .NETC applications in that I need to implement the PDF download functionality. I know how to download a file with an existing but my problem is that I get to pdf the contents of the file as a line from the SOAP service. The PDF content I receive is similar to: %PDF-1.4% and 1.0 obj obj (Mozilla/5.0 (Windows NT 6.1; Win64; x64) AppleWebKit/537.36 (KHTML as Gekko) Chrome/65.0.3325.181 Safari/537.36) /Producer (Skia/PDF m65) /Creation (D:20180407105711'00'00') /ModDate (D:20180407105711'00'00') endobj 2 0 obj qgt; stream x'S9f..... I have the following code to download the file: public FileResult Download () - byte. Byte - System.IO.File.ReadAllBytes (to: folder/myfile.txt); fileName - myfile.txt; back file (fileBytes, System.Net.Mime.MediaTypeNames.Application.Octet) But how do you convert a file content line into an array of byte? I tried to convert the string into a byte array using MemoryStream and bytes and encoding. Ascii. GetBytes (someString); but in this case the PDF reader shows the error that the file is corrupted. Hi, I need to display the report in PDF format. That's how I do it, I'm not sure it's the right way to go. Please let me know if I'm doing something stupid. I run the report through SDK and the PDF output format. I write as a result of bytes in the file. Then I read this file to write these bytes on OutputStream from HttpServletResponse.And settings type content like app/pdf. But I don't get a PDF outlet. All I see is the same raw bytes. That's the code I'm doing this. Can anyone please that it is I do wrong. OutputStream outputStream - response.getOutputStream(); Line exit -; fileName-request.getParameter (fileName); log.debug (Filename: th fileName); String filePath - /reports/; File f=new File (filePath, fileName); response.setContentType byte' buf - new byte (8192); FileInputStream inStrim - the new FileInputStream (f); int sizeRead No 0; int byteLengt No 0; While ((sizeRead - inStream.read (buf, 0, buf.length)) zgt; 0) - log.debug (size:size Read); outputStream.write BytLengt and size Readable; - response.setContentLength inStream.close(); outputStream.close(); outputStream.flush(); outputStream.flush(); pdf byte array to string c#. convert html string to pdf byte array c#. convert pdf byte array to string java
